

[1] Ash x Hanna EN

Day 1: Hanna (The Tutorial Client)

[SCENE START]

(The bell rings. Hanna walks in, looking completely defeated, holding a notepad. Ash is wiping the counter with a rag).

Hanna: Hi... Are you the mechanic?

Ash: *(Normal)* That's what the sign on the door says. Welcome to Kadence. Rough day?

Hanna: Rough week. I just bought a bike off the local marketplace. I wanted to start commuting to work, but it's a disaster. Every time I turn, my toe hits the front wheel! And it's so heavy I can barely carry it up to my apartment.

Ash: *(Thinking)* Toe overlap and a heavy frame. Let me guess, she bought a cheap steel 29er that's three sizes too big. Classic.

[PLAYER CHOICE 1 - Figuring out the sizing & weight]

- **Option A:** "Sounds like you bought a steel mountain bike. We need to switch you to a lightweight aluminum frame." *(Focus on material)*
- **Option B:** "Toe overlap? How tall are you? The frame size is probably completely wrong for you." *(Focus on geometry)*

If Option A:

Hanna: Steel? I didn't even check the specs, I just bought it because it was matte black! But yes, a lighter frame sounds amazing.

Ash: *(Thinking)* Rule number one: never buy a bike just because it looks cool. We need Aluminum for her.

If Option B:

Hanna: I'm 158 cm. The seller told me "one size fits all"! Was he lying?

Ash: *(Sigh)* "One size fits all" is the biggest lie in the cycling industry. She needs a Size S frame immediately.

Hanna: Also, my current bike has this huge spring in the middle and on the front fork. But when I pedal uphill, it just bounces up and down like a pogo stick. I'm wasting so much energy!

[PLAYER CHOICE 2 - Drivetrain & Suspension]

- **Option A:** "You don't need suspension for city commuting. A rigid fork will save your energy."
- **Option B:** "You probably have too many gears. Let's simplify your drivetrain."

If Option A:

Hanna: A rigid fork? Won't that be bumpy? Honestly, I don't care, as long as it helps me actually get up the hill without dying.

Ash: *(Thinking)* Smart choice. Fake suspension on cheap bikes just steals your pedaling power.

If Option B:

Hanna: Yes! My current bike has like 21 gears, and the chain keeps falling off when I switch the left lever. It's a nightmare.

Ash: *(Thinking)* A simple 1x drivetrain is what she needs. No front derailleur, no dropped chains.

Hanna: So... can you build me something light, simple, and actually my size? My budget is pretty tight, around \$350 max.

Ash: *(Normal)* Leave it to us. You won't be fighting your bike anymore.

[ENTER WORKSHOP UI] → *(Player builds the bike)*

Day 1+1: The Delivery (Result Screen)

[SCENE START]

Hanna: Is it ready? Tell me it doesn't weigh 20 kilos!

Ash: *(Normal)* Here. Try lifting it.

(Behind the scenes, the game calculates the stats. Ideal build: Alu City Hybrid (Size S), Shamano CORE 1×10, Rigid components).

[IF SCORE > 90% (Perfect City Commuter Build)]

Hanna: Oh wow... It's so light! And the gears look so simple to use! Thank you so much, I can actually look forward to my commute now!

(Hanna happily pays and rolls the bike out of the shop)

Ash: *(Smug)* Another pair of knees saved. We're basically doctors, but with wrenches.

[IF SCORE < 50% (Player built a heavy steel bike or used complicated gears)]

Hanna: Wait... this is just as heavy as my old one! And why does it have suspension? I told you I just ride on asphalt! I don't think I can afford to waste money on this...

(Hanna leaves looking extremely disappointed)

Ash: *(Sigh)* Well. We just sold a tractor to someone who needed a scooter. Not our best work, boss. Let's hope she doesn't leave a Lelp review.
